1:1, One:One, the Prime Ratio, equals One, the conceptual first cause, prime mover, which represents the basic Prime Ratio and Causal relationship that corresponds one thing to another. Specific coordination and arrangement (how) of components (what) for possible greater complexity. From the base, prime ratio, 1:1, 0/1 base duality, comes more complexity, 1:2, etc. This is the multiplicity, diversity and variability of creation from the division of one (singularity), into many.

There are two causal factors, with the initial source essence being from within an agent. The secondary causal factor is the effect generated by the first causal factor within an agent. The effect will affect another causal agent that can generate another cause related to the first. The source of the first cause is internal, that generates an action in the external.

AGGREGATE SOWING AND REAPING

*We're all in this together. Our actions affect others and their actions affect us.
As one suffers we all suffer. As we and others sow, so shall we and others reap.*

CAUSALITY, CYCLE, LOOP, FEEDBACK, RECURSIVE SYMBOLISM

$i = i + 1$

Output feeds Input
Orobouros
Infinity

Output feedback as input to be processed again as output for more input.
Generator feeds generation, generated feeds generator to feed more generation.

Cause > Effect generates Affect

Cause = Affect from Effect

Cause > Effect generates Affect

Cause = Affect from Effect

The causal force is an effect that potentially affects another, as input stimulus, as a causal force, to then generate another causal force as a response.

Cycle, loops, iterations allow smaller & easier representation than new representations each time. All time references from the second to the year is a loop, cycle, etc. Inventing a new name for each day, or each second being of different length is not useful.

Math and numbers are part of the base programming of nature. Abstract numbers are infinitely precise, with infinite information, ex: pi, phi. Physical measurements are finite. A computer program, reality and nature have limited precision of numbers for measurement. The ideal infinite numbers can only be measured to a limited degree of precision.

Free will is not required to develop growth and symmetry, phi ratio, pi, etc., it is biological programming. Free will expresses thought, emotion and action through the beings capable of doing so at varying degrees, as animals are.
